

ST. THOMAS AQUINAS WEBSTER CITY, IOWA

Location: Webster City, IA

End Date: Ongoing

Project Size: 7,000+ sq. ft.

Budget: N/A

Project Description:

RMH is proud to play a role in the work done at St. Thomas Aquinas in Webster City. This project was structured in multiple phases that focus on improving aspects of the church, education areas, and general exterior. Interior changes to the facility included finish upgrades, HVAC improvements, and a secure entrance for the school. Working to respect the space's history was our team's major design focus.

The experience for members has improved on this project within the interior and exterior of the building. Incorporating a covered entrance along the south to the school allowed for a better entry experience for all transitioning into a new secure entrance. Improvements in the facility's HVAC system provided a safer experience due to improved technology.

The architectural design language reflected the traditional style of the building by incorporating an updated material sense that revived the space. Color selections, materials, and overall coordination of thoughtful design made for a successful project.
